Influences of the Electric / Hybrid Aircraft Developments on Forecasting the Demand in Small Aircraft

- 1. Introduction**
- 2. Forecast methodology**
- 3. Electric / hybrid aircraft developments**
- 4. Applied forecasting methodology**
- 5. Results and discussions**
- 6. Conclusions**

1. Introduction

- **Small aircraft transport (SATS) opens a new business segments in air transportation system**
- **The aircraft with electric / hybrid propulsion systems are most promising future cleaner technologies**
- **Because the barriers (low specific energy of batteries), first electric / hybrid aircraft will be introduced into the service in SATS**
- **Influence of electric / hybrid aircraft on demand in SATS is an important, but not so simple solvable task.**
- **Practice in SATS forecasts (EPATS, SAT-Rdmp, PPLANE, ESPOSA, etc.) support this work**

2. Forecast methodologies

➤ Drivers:

- economic: GDP per capita, net income,
- societal: population, ages, traveling habits
- technical, technological aspects: transport infrastructure, airports net,
- dummies: events, step changes in future trends or their slopes.

➤ Methods:

- simple regression models
- nonlinear models, soft computing
- specially developed models
- using the travel budget, innovation diffusion theory – „S” - curves

2. Forecast methodologies

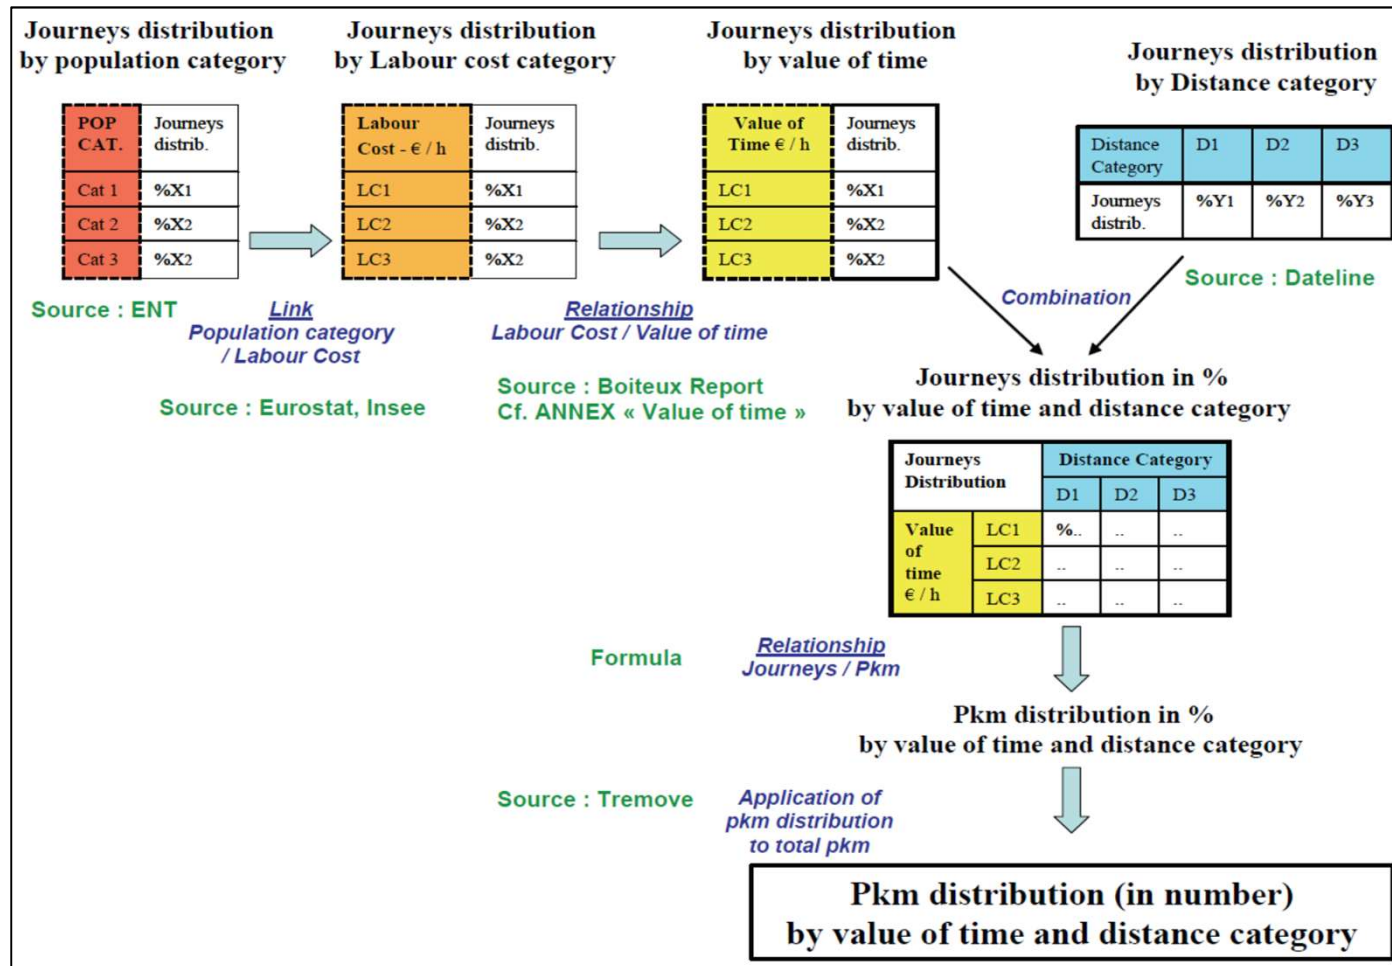

➤ Problem: independence from economic drivers No. 1., GDP

2. Forecast methodologies

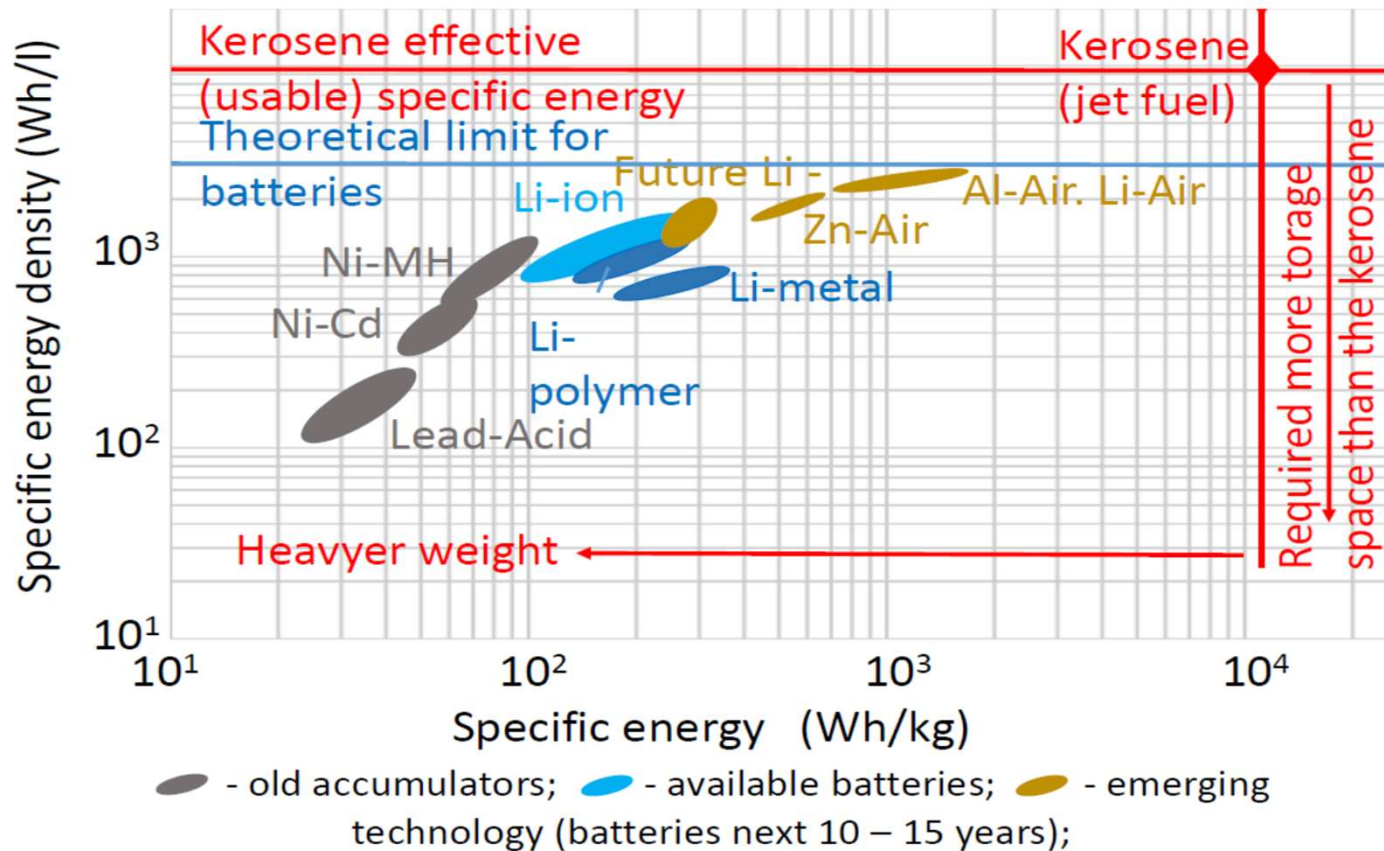

➤ Problem: independence from economic drivers No. 1., GDP

3. Electric / hybrid aircraft developments

➤ Used energy of 1 l kerosene → 3 kWh → 9 – 10 kg batteries

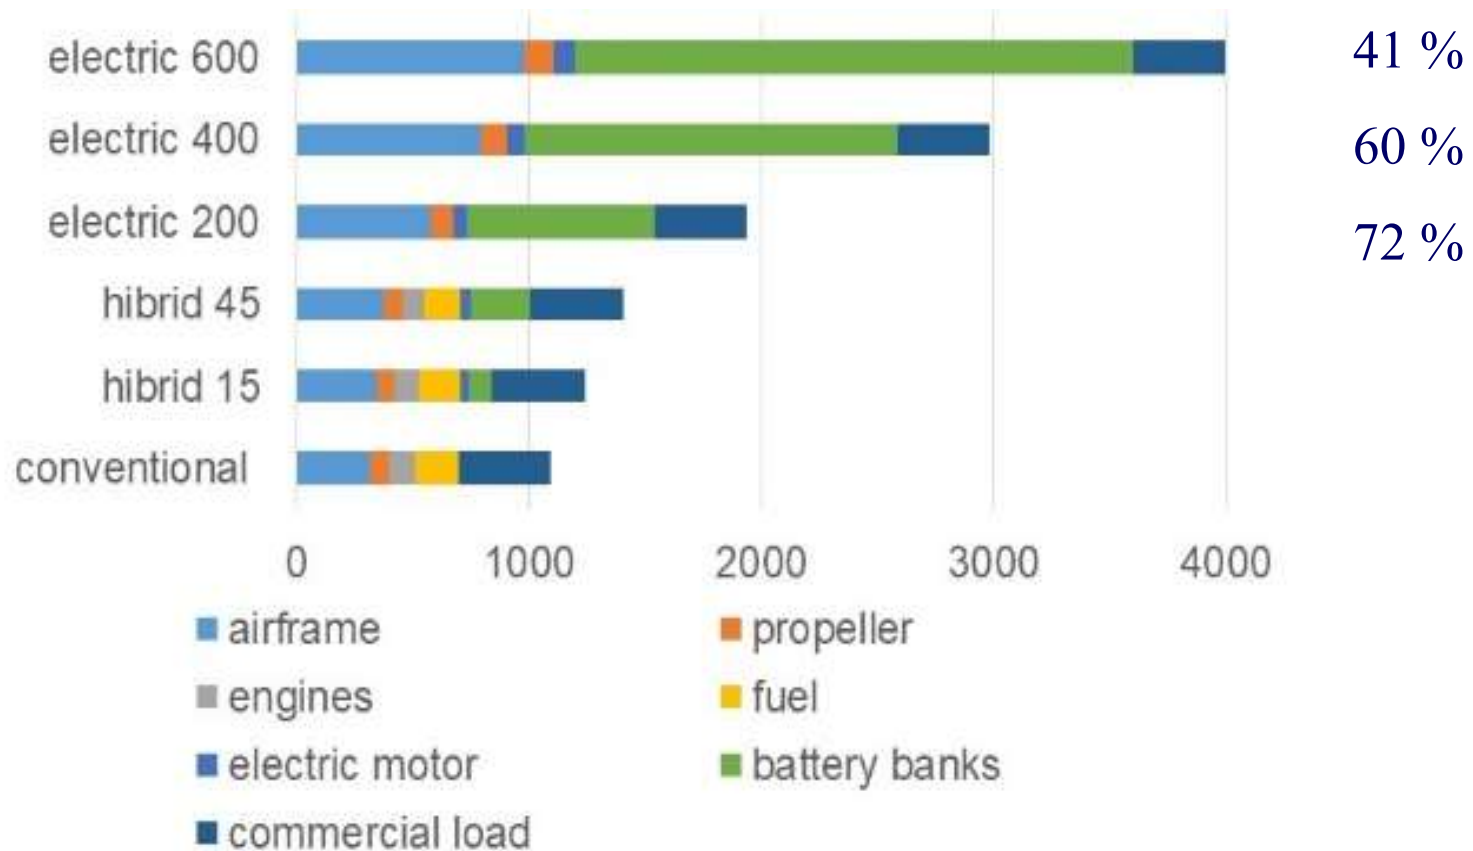

3. Electric / hybrid aircraft developments

➤ Mass breakdown → reducing the range in %

Range reduction

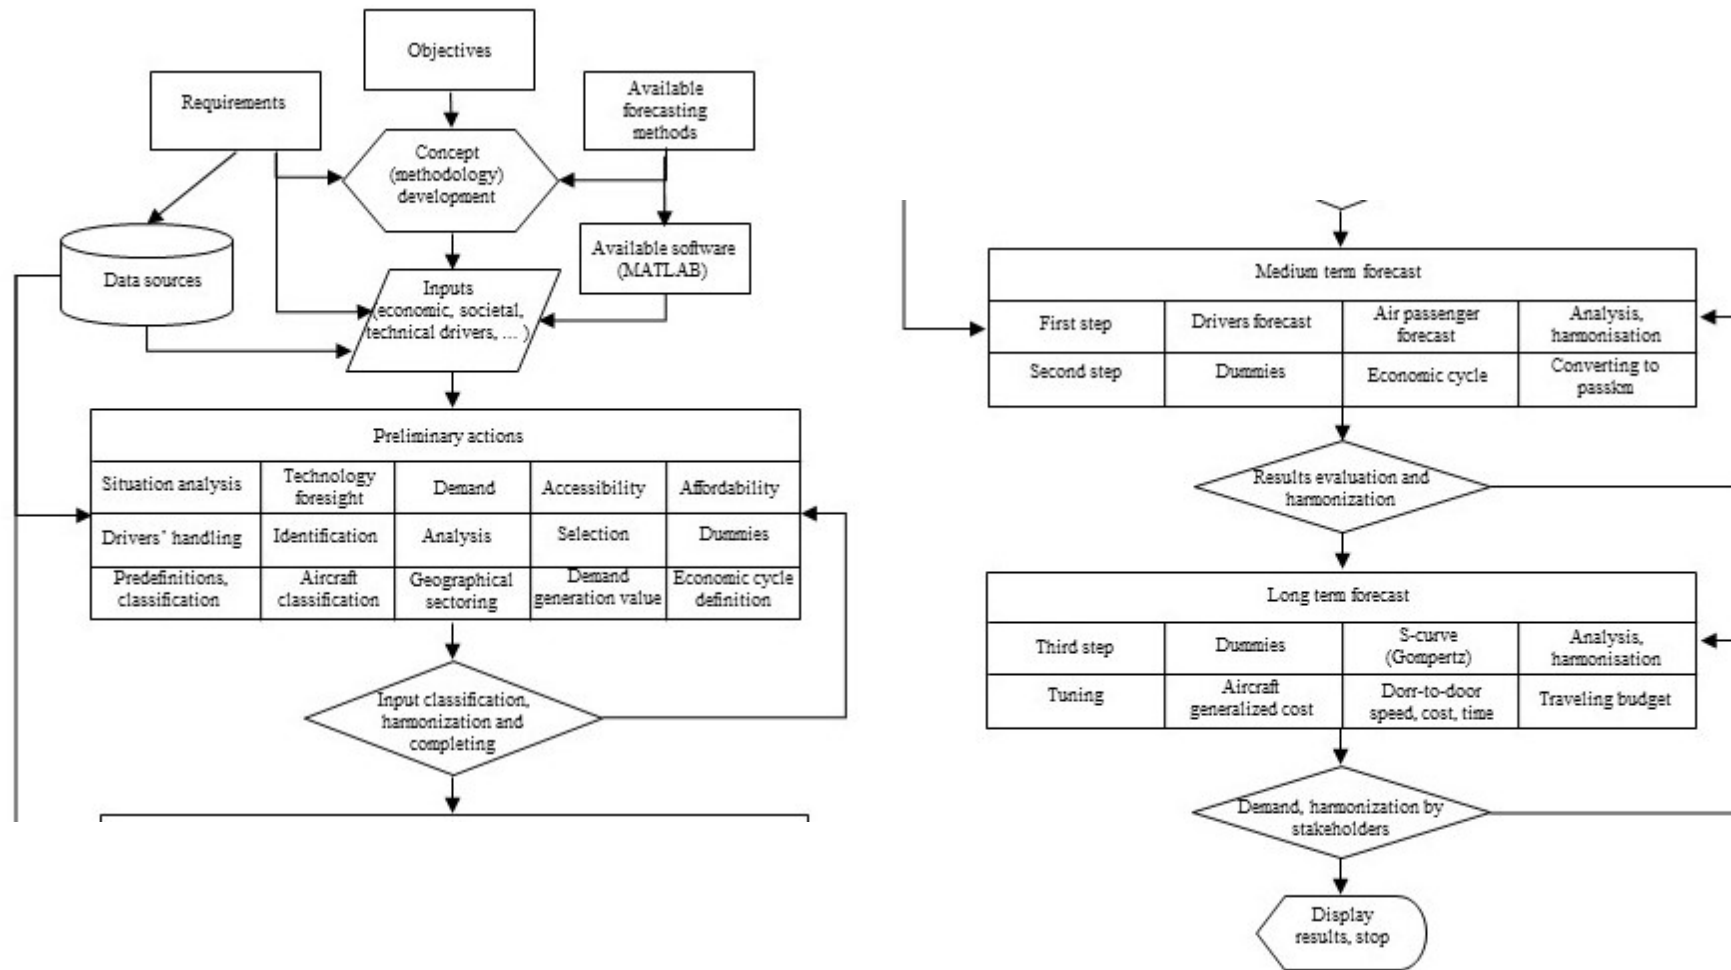

3. Electric / hybrid aircraft developments

➤ **Dummies:**

- 2020 – 22: small , 2-seaters aircraft – 7 – 10 % increases for 3 – 5 years,
- 2026 – 28: 4 – 9 seater aircraft – change slope for 4 – 6 %
- 2033 – 35: small aircraft with range up to 1000 km (increasing) and regional aircraft decreasing the slope) final effect increasing for 2 – 3 %

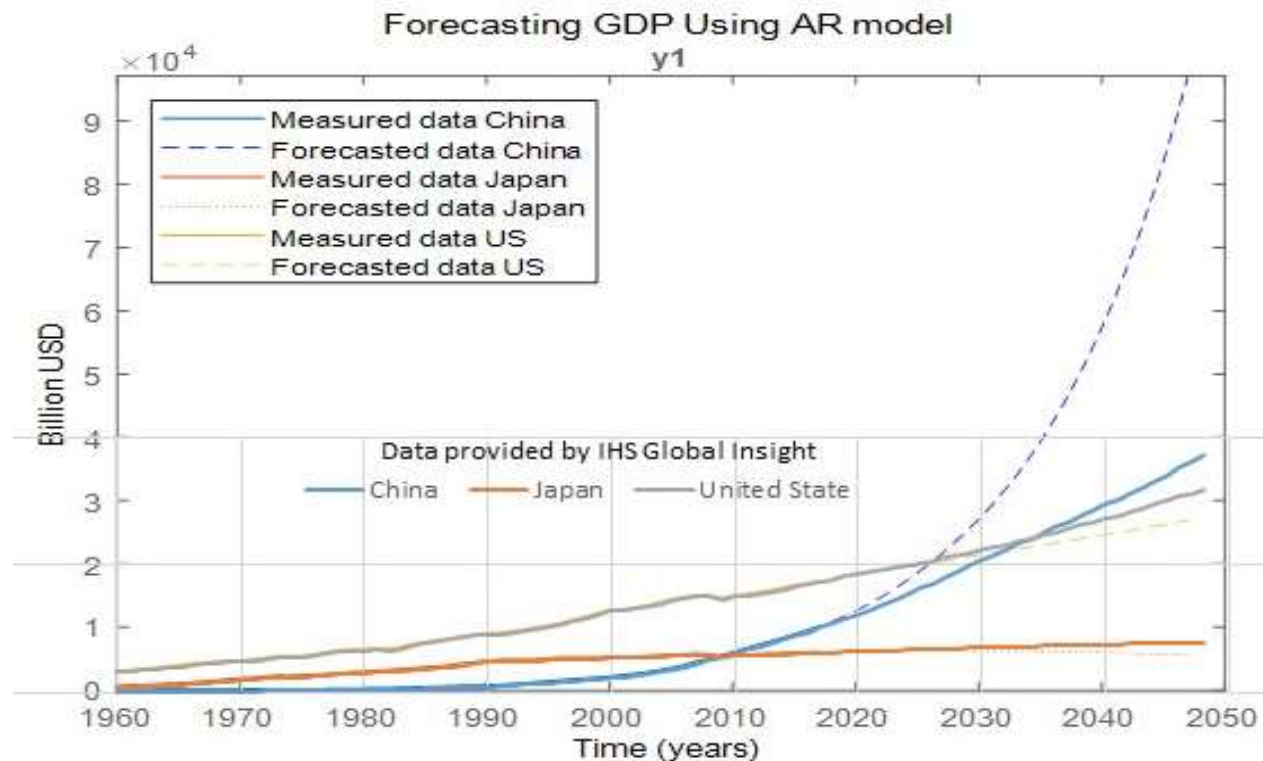

4. Applied forecasting methodology

4. Applied forecasting methodology

- **Examples: comparison: GDP forecast and forecasted input**

4. Applied forecasting methodology

➤ Examples: using different AR and ARX models

➤ AR estimation:

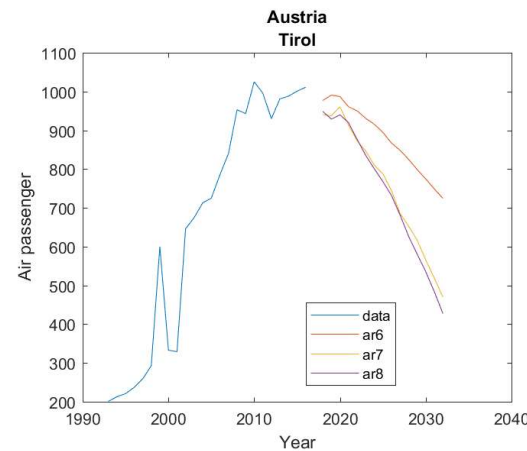

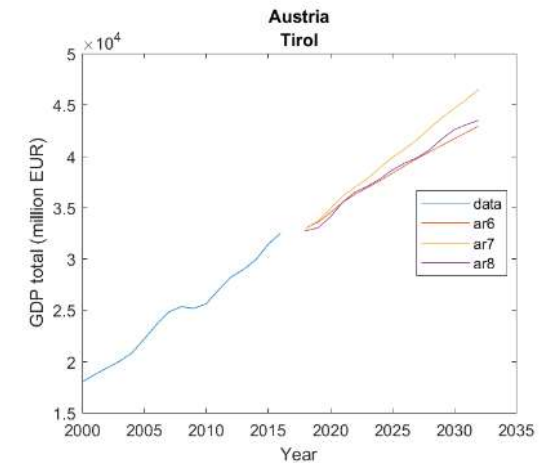

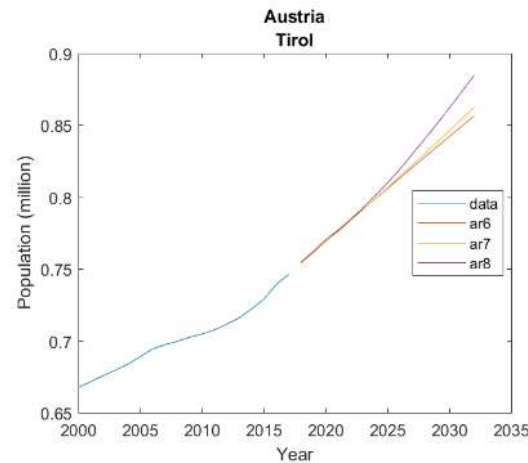

- Estimate drivers

➤ ARX estimation:

- Use AR estimated drivers as exogenous inputs

➤ Tuning:

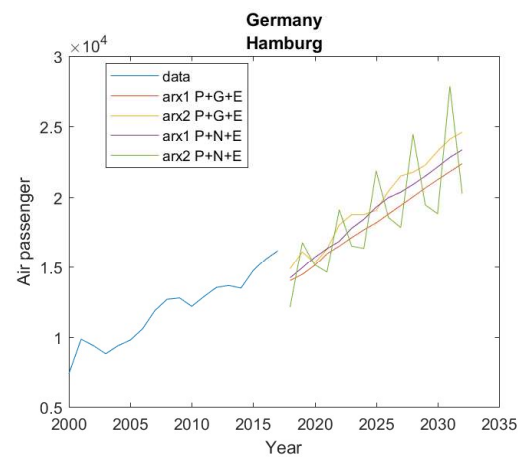

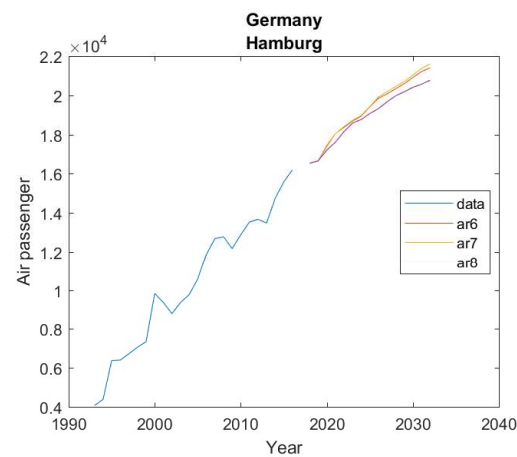

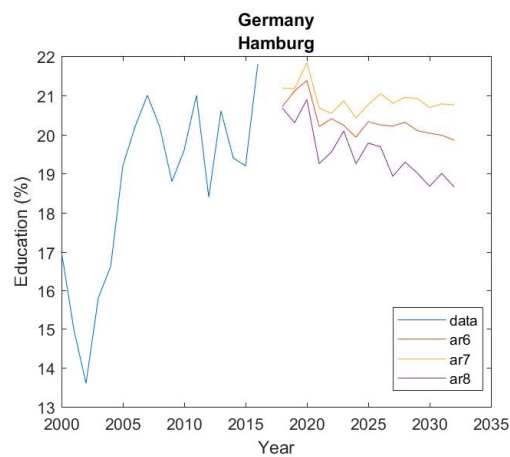

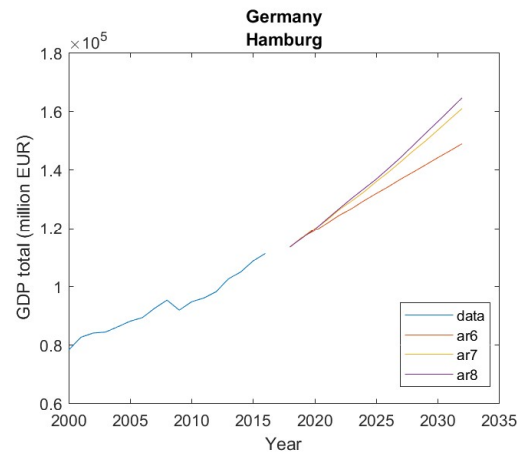

- Select stable polynomial orders
- Select drivers depending on availability and data quality

4. Applied forecasting methodology

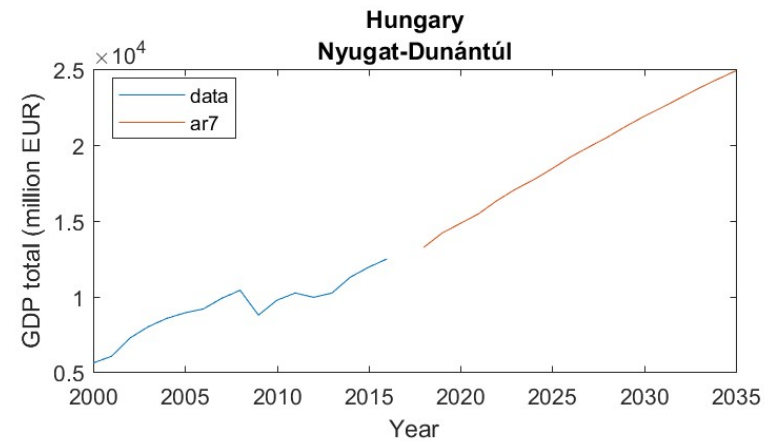

➤ Examples: using different AR and ARX models

4. Applied forecasting methodology

➤ Examples: fitting Gompertz curve

4. Applied forecasting methodology

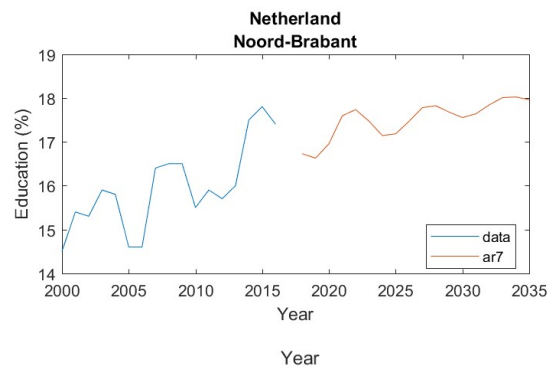

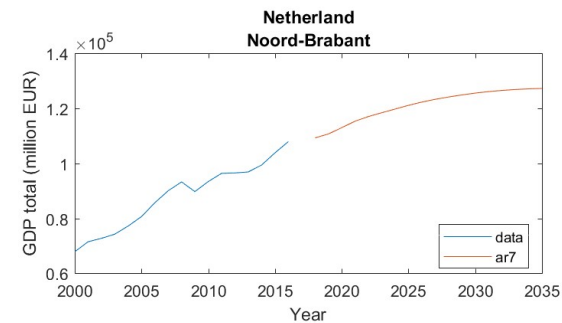

➤ Examples: input harmonization and correction

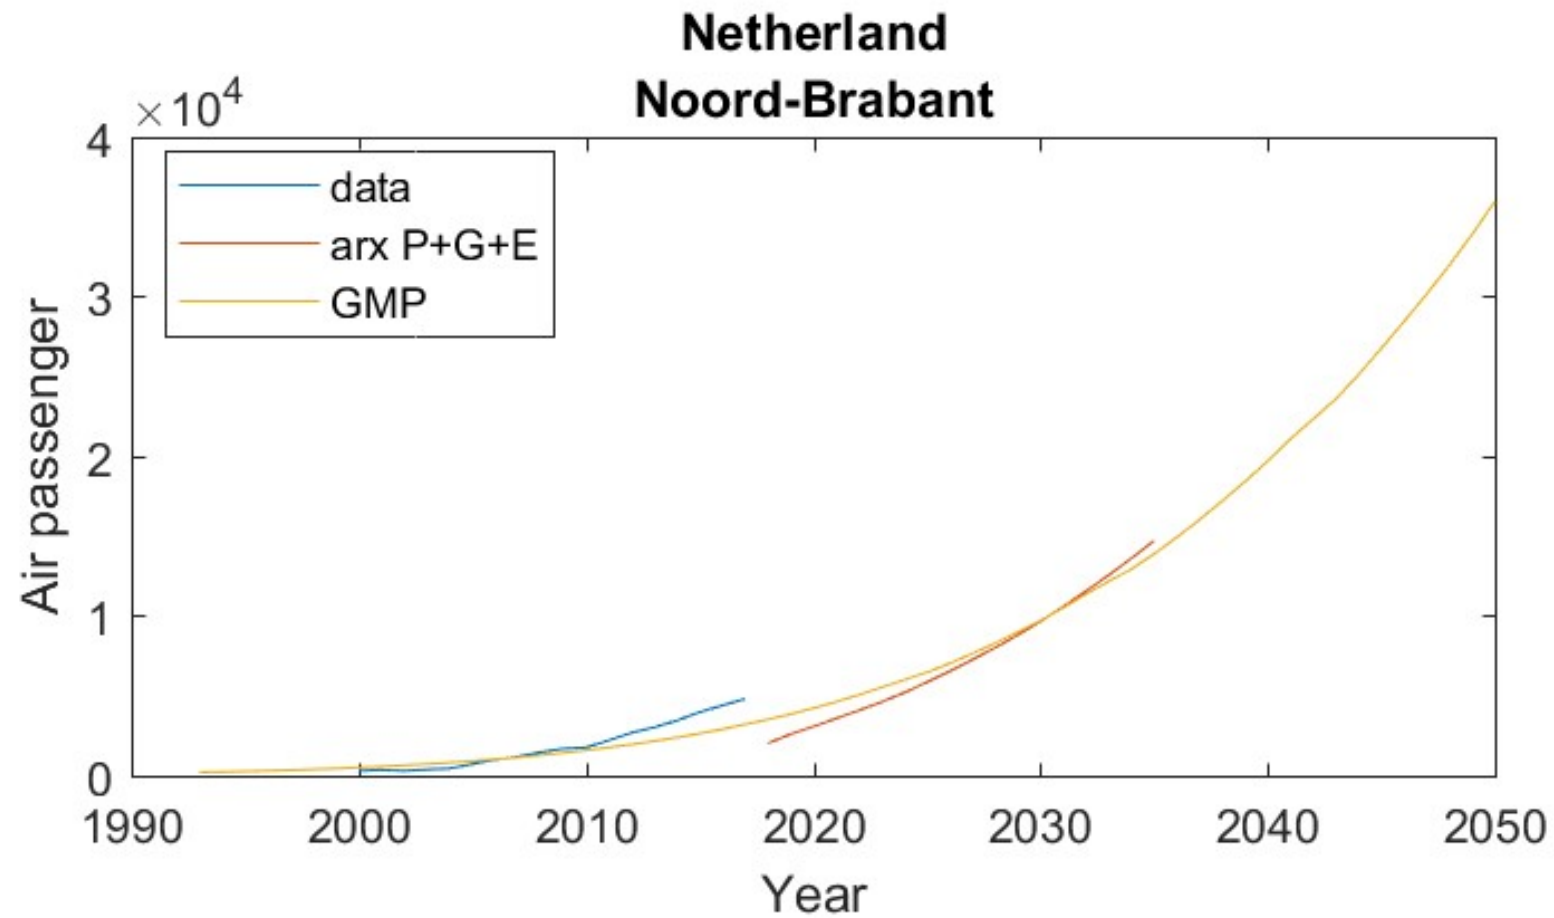

5. Results and discussions

- **Finalize estimation :**
 - Correct for economical cycles, short and long term
 - Use dummy factors for unique events

5. Results and discussions

6. Conclusions

- **The electric / hybrid aircraft will be entered into operation in the small air transport systems.**
- **They will have considerable effects on demand in SATS**
- **A special forecasting methodology was developed**
- **It uses dummies identifying the electric /hybrid aircraft entering into service**
- **The methodology shows predicted effects of electric / hybrid aircraft on demand in SATS**
